PROFESSIONAL SUMMARY

AI Data Operations Lead and Full-Stack AI Engineer with 4+ years building high-accuracy annotation pipelines for computer vision and LLM training, and shipping production software end to end. Proven record of 95-98% dataset accuracy and 25% efficiency gains, having trained and led 200+ annotators. Founder and sole engineer of Novi AI, a production multi-agent conversational platform built on Claude and OpenAI.

WORK EXPERIENCE

Founder & Sole Engineer

Jul 2025 - Present

Novi AI (Self-Employed), Accra

- Designed and built a production multi-agent system (Claude + OpenAI) with a router agent dispatching to domain specialists over a shared knowledge graph.
- Architected a Node.js/TypeScript/Express backend, Next.js 14 web app, and Expo mobile app with 85% feature parity across platforms.
- Built a 24-case deterministic evaluation framework to catch regressions before deployment, plus a persistent memory graph as the product's core moat.
- Deployed and operate production infrastructure on Vercel and Render with Firestore, Cloudinary, Twilio, and Sentry monitoring. Live: novi-ai-alpha.vercel.app

Data Annotation Team Lead

Jan 2026 - Present

Aya Data, Accra

- Lead a squad of 10+ annotators powering LLM and computer-vision training pipelines; consistently exceed the 90% utilisation standard.
- Translated complex client technical guides into actionable SOPs and onboarded new hires to full proficiency in V7, Labelbox, and CVAT within one week.
- Maintained 95%+ accuracy across high-stakes healthcare and renewable-energy projects through daily QA alignment.
- Achieved a 25% increase in annotation efficiency and 20% reduction in rework via daily stand-ups and real-time blocker removal.

Senior QA Lead & Data Annotator (promoted to Team Lead)

Apr 2022 - Dec 2025

Aya Data, Accra

- Led QA for AI training data across healthcare, renewable energy, mobility, and media, achieving 98% accuracy and reducing pipeline errors by 20%.
- Trained and supervised 200+ annotators over the role, boosting team efficiency 25% through workflow optimisation and documentation.
- Delivered 2D/3D LiDAR, image, video, and text annotations across healthcare, renewable-energy, mobility, and media clients.
- Created training manuals standardising processes across V7, Labelbox, CVAT, and Dataloop.

Video Annotation Specialist

May 2026 - Jun 2026

micro1, Remote

- Reviewed AI-generated video annotations and captions, correcting model outputs to improve training-data quality for short-form video understanding.
- Audited AI predictions against source footage, flagging and fixing errors to raise dataset accuracy and reduce model hallucination.

Data Annotator - Vehicle Labelling

Oct 2025 - Present

CMT Scanner, Remote

- Label vehicles (trucks, trailers, and other classes) in image and video data for computer-vision and autonomous-systems training.
- Apply precise bounding-box and class annotations to client specifications, maintaining high accuracy across large batches.

TECHNICAL PROJECTS

Novi AI *Node.js, TypeScript, Next.js, Expo, Claude & OpenAI APIs*

Production multi-agent conversational platform with tool-use orchestration over a shared knowledge graph; built solo across backend, web, and mobile. Live: novi-ai-alpha.vercel.app

Supervisely Labelling-Job Assigner *Python, Streamlit, Supervisely REST API*

Internal dashboard replacing manual annotation-job assignment with point-and-click range-splitting (gap/overlap detection), workload visibility, and bulk un-assignment; optimised API usage by ~200x. Live: supervisely.streamlit.app

LiDAR Reviewer Suite *Google Apps Script, Python, BasicAI REST API*

QA-automation suite for a 3D LiDAR project: auto-fills cuboid counts, flags class/attribute/visibility errors with human-in-the-loop guardrails, audits track-ID consistency, and generates volume reports.

Multi-Project Productivity Merge Tool *Google Apps Script, Google Sheets API*

Merges annotation productivity data from 12+ project sheets into one master with role-aware deduplication and automated daily summaries; runs on scheduled triggers.

V7 Performance Dashboard & Sync *Google Apps Script, V7 export data, Google Charts*

Reusable per-annotator dashboard (TPT, accuracy, speed, variance) with date filtering and auto-generated charts; schema-flexible sync that works across any V7 project.

Annotation Billing Tool *Python, pandas, V7 Darwin JSON*

Counts billable annotation properties per annotator across ~1,600 export files, reconciled against coverage and quality reports to produce auditable, per-person billing.

SKILLS

Programming & Engineering: Python, Node.js, TypeScript, Express, Next.js 14, React, Expo (React Native), Streamlit

AI & Data: Data Annotation, Computer Vision, LLM Training Data, OpenAI API, Anthropic Claude API, Agent Orchestration

Annotation Tools: V7, Labelbox, CVAT, Dataloop, Supervisely, BasicAI / Xtreme1

Infrastructure: Firebase / Firestore, Vercel, Render, Twilio, Cloudinary, Sentry, REST APIs

Other: Team Leadership, QA Processes, SOP Development, Human-in-the-loop Review

EDUCATION

BSc. Biochemistry

Jan 2015 - Nov 2019

University for Development Studies, Tamale

- Scientific foundation in rigorous, evidence-driven analysis that carries into high-stakes data quality work.

CERTIFICATIONS

- Python for Data Science, AI & Development (IBM / Coursera)
- Introduction to Artificial Intelligence
- AI Beginners Guide: What is AI?
- Attention to Detail & Quality Assurance
